

Professional Page - the most progressive Desktop Publishing Program with advanced features found nowhere else.

"Astonishing accuracy." "Unparalleled precision." "Power that's easy to employ." "Incredible versatility."

Those are the words you'll be echoing as you learn to use this amazing desktop publishing/type-setting package from Gold Disk. Good typesetting packages have been available for the P.C. But they weren't always easy to learn. Versatility was limited. Desktop publishers were available. They were versatile but lacked fine precision.

Now Professional Page gives you incredible power and precision, as well as ease of use and versatility. And, we'd like to include a few world firsts, like internal color separation with our optional Professional Color Module. Till now desktop publishing could only be "near typeset quality." With Professional Page, desktop publishing and typesetting have become one.

Here are some of the features: hi-res graphics; total support for bit-mapped and structured graphics; color displayed on screen in 16 shades of grey; import IFF color pics; internal color separation; send your postscript compatible file directly to Linotronic typesetters for truly professional typeset quality; kerning and tracking; four powers of magnification; full fledged on-screen text editor with all the important features you require; auto-hyphenation; text run-around; font sizes from 1 to 127 point; compatible with WordPerfect.

This state-of-the-art program is a boon for professional designers and typesetters. Create comps with speed and accuracy not possible before. Virtually eliminate linears. Make your initial presentation close to the final product. And for the corporate desktop publisher - bring power and sophistication, unavailable until now, within easy reach.

Desktop publishing just took a giant leap forward. Gold Disk invites you to exploit Professional Page's versatility and power.

Professional Color Separation Module - Software that turns your Amiga into a color separator.

Professional film separators use color separation equipment called scanners. Now your Amiga can become a scanner. Internally Gold Disk's Color Module divides each full color picture into four distinct colors: cyan, magenta, yellow and black. The same colors offset printers use to print all full color pictures.

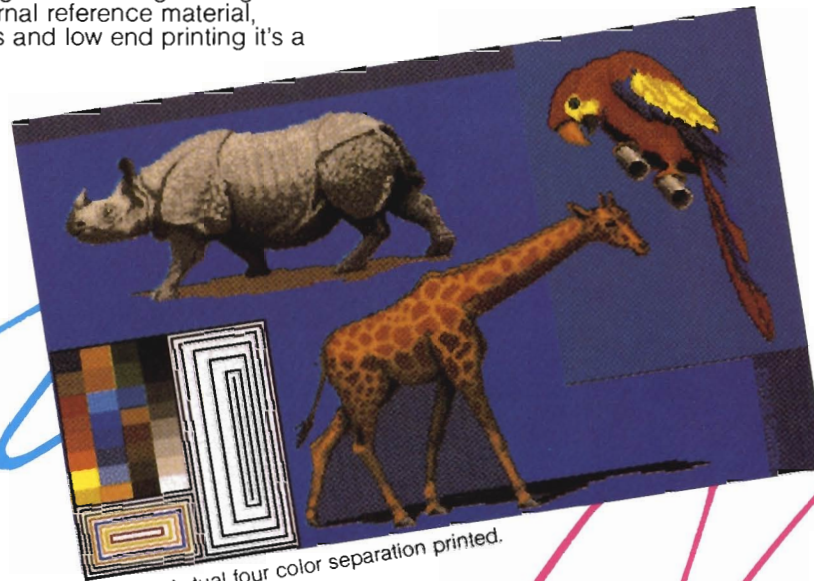

The Color Separation Module will separate any Professional Page or IFF file, be it Deluxe Paint, Digi-View, Digi-Paint or Aegis Images. For internal reference material, manuals and low end printing it's a

real step forward. We liken it to the difference between 300 dot laser printing and professional typesetting.

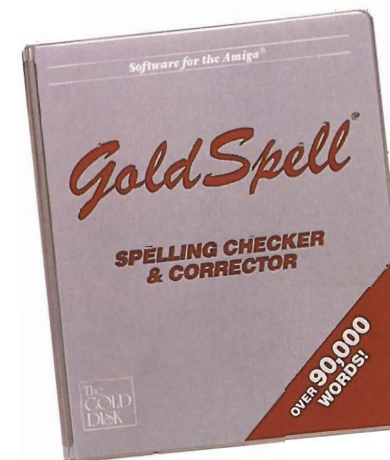

This revolutionary product must be seen. Now corporations and individuals can inexpensively step into the four color printing market.

\$195.00 U.S. \$259.00 Canadian

Available Fall 1987

GoldSpell - Sophisticated spelling checker that works with virtually any Amiga word processor.

"If you have a word processor, you should have GoldSpell too." *Amiga World, March '87.*

Say good bye to inadvertant spelling mistakes. Write without stopping to look up words. Make each document letter perfect.

GoldSpell works with any Amiga word processor. It quickly checks documents for accuracy in spelling and readability. GoldSpell even suggests possibilities. Need to add technical words? Create your own dictionaries. GoldSpell comes with a built-in 90,000 word lexicon. Enhance your literary image with GoldSpell.

The Gold Disk Family of Productivity Tools:

Powerful
State-of-the-art
Easy to learn, easy to use
Enhances creativity and Fun.

From the leader in Amiga desktop productivity software.

Every industry has innovators and leaders. Gold Disk has made a corporate commitment to be the leader in desktop productivity software. We were the first with a desktop publishing program for the Amiga. We pioneered color separation for a micro publishing program. We'll be first in innovative software for creative word and visual productivity tools for the Amiga. And we'll also be first in customer satisfaction and loyalty.

When Gold Disk starts to create a new program we study what the best in the field have done. We learn from their insights. And then improve on them. We provide you with the most advanced software possible.

We hope you'll enjoy browsing through this mini-catalog. If you see software you would like to have simply call our U.S. toll free number to order 1-800-387-8192. In Canada call (416) 828-0913.

PageSetter - "... an excellent way for any Amiga owner to break into desktop publishing."

Amiga World, June '87.

PageSetter emulates high-end packages with the following built-in professional features: zoom, import of text and graphics, and the ability to freely use different typefaces of varying sizes and styles. As well, PageSetter will allow you to use any type font that can be imported

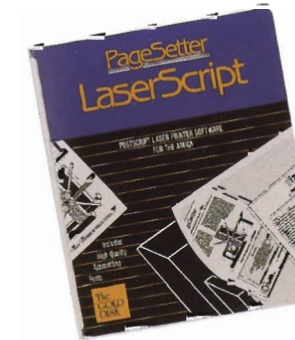

by the Amiga. In addition, you may create borders of varying widths and drop shadows (so popular with modern graphic artists).

PageSetter is easy to use. Pull down menus control all operations. Point and click. No codes to memorize. PageSetter's power and ease are astonishing. Built-in grids, rulers, measurement indices, margin indicators and automatic text-flow make this entry level desktop publishing program easy to master, a joy to use.

PageSetter will import and read popular word processor files such as Textcraft and Scribble! It comes with its own sophisticated text editor as well as a built-in graphics package and a 100 piece library of clip art. PageSetter will import all IFF graphic files from packages such as Deluxe Paint and Aegis Draw.

PageSetter LaserScript or PageSetter Jet - For those with access to a PostScript or HP Laser Jet printer.

Now those on the cutting edge of laser technology can use their PageSetter program to output at 300 dots per inch. Now your Amiga becomes a powerful design and publishing tool.

PageSetter LaserScript mounts easily to your PageSetter. It comes with four popular professional typefaces: Courier, Helvetica, Times and Symbol. All come in four sizes: 8, 12, 16, and 24 points. A built-in utility allows you to scale any font.

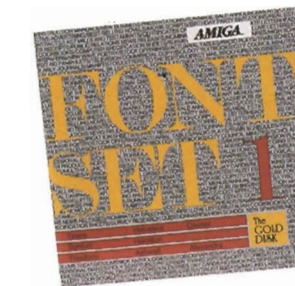

With the PostScript version you may even send your files to some professional typesetters (such as the Linotronic 300) for true typeset quality.

PageSetter Jet is a module dedicated to the HP Laser Printer.

Each Module: \$44.95 U.S. \$59.95 Canadian

Fontset 1 - Type fonts that spice up the look of your page.

FontSet 1 is an exciting package of eight distinctive typefaces, (including Helvetica and Times) each in four point sizes. Each typeface has a unique look. Using the right typeface will give your written piece greater impact.

FontSet can be easily installed onto Workbench, PageSetter, or other word processing and graphics packages. FontSet can be used in conjunction with other fonts currently available for the Amiga. A utility program allows for resizing of any font.

Go ahead. Enhance the look of your page layouts with FontSet 1.

\$34.95 U.S. \$45.95 Canadian

ComicSetter - A new productivity and communications tool with endless possibilities.

Cartoons are one of the most effective means ever invented to teach and communicate. They are non-threatening, amusing and entertaining. Their learning curve is astonishing, cutting across social, economic, cultural and ethnic barriers.

Now this powerful learning tool is at your disposal with ComicSetter. You need not know how to draw. ComicSetter has a built-in library of characters and scenes. You create scenes by means of an easy to operate user interface and a complete arsenal of drawing and paint tools. Create characters. Place them wherever you want. Your color range is practically unlimited.

ComicSetter comes with a library of characters and backgrounds. You'll be amazed at how quickly you're creating full blown stories. These disks have been developed in consultation with educators.

Unleash your imagination. Teach your students more effectively. Communicate serious and important messages throughout your organization. It's at your fingertips. It's ComicSetter. Another Amiga first from Gold Disk.
